

My family and I are being served by FM station 91.1 in our local community. My family and I would be negatively impacted by a LPFM broadcast transmission interfering or replacing the 91.1 frequency modulation signal that we receive on a daily basis for our news and listening pleasure. I believe that the service that is being provided by the current radio transmission is in the public interest, and please consider this in making any decision to permit LPFM transmissions. Thank you for your consideration, Steven Garner
